### **DETAILED ACTION**

#### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/31/05 has been entered.

#### **REJECTIONS WITHDRAWN**

2. There are no rejections withdrawn.

#### **REJECTIONS REPEATED**

3. All of the rejections maintained in the final rejection of 5/27/05, page 2, paragraphs 4-6 are maintained for the reasons of record.

#### **NEW REJECTIONS**

4. There are no new rejections.

#### **ANSWERS TO APPLICANT'S ARGUMENTS**

5. Applicant's arguments filed 7/27/05 have been carefully considered but are deemed unpersuasive. The claim objections set forth in the final rejection of 5/27/05

Art Unit: 1772

have been withdrawn so applicant's arguments with regard to the claim objections are moot.

Applicant has argued that Watkins seeks to create flexible materials while the teachings of Frisk add clay platelets which stiffen polymer materials. However, Frisk only briefly discusses the stiffening effect (column 4, lines 20-24). The overwhelming purpose of adding the platelets is to increase the gas barrier properties of the film (column 3, line 54 through column 4, line 28). It is clear that the stiffening effect is directly proportional to the thickness/concentration of the platelets. Conversely, Frisk clearly discloses that even small weight percentages of the clay material provides substantial increases in the impermeability of the polymer layer (column 4, lines 24-28). Therefore, when viewing the entirety of both references it is clear that the platelets of Frisk can be added to the film of Watkins at low concentrations to greatly improve the gas barrier properties of the film of Watkins without adding substantial thickness to the film. Gas impermeability is very sought after in the shoe bladder arts which is one of the uses of Watkins film.

In response to applicant's argument that the platelets of Frisk are not combinable with the film of Watkins, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

Art Unit: 1772

Applicant has provided the same arguments for the obviousness-type double patenting rejections with regards to the Frisk reference and the arguments provided above are repeated for the obviousness-type double patenting rejections.
